

Swiss quality Vita Health Care supplements

Taking nutrient supplements or preparations with near-natural active ingredients can have the following beneficial effects on your health:

- ◆ The elimination of a specific nutrient deficiency
- ◆ The treatment of an existing illness
- ◆ The prevention of illnesses (as a prophylactic measure) – to maintain health

Many research studies show that certain nutrients, when taken in high doses (significantly more than can be obtained from a normal diet), may display healing abilities that are not apparent in small doses.

Taking them systematically and for a prescribed period is important for the success of the therapy.

Vita Health Care AG offers a comprehensive product range:

- ◆ For complaints of the musculoskeletal system
- ◆ For tiredness and weakness
- ◆ For difficulties in concentrating
- ◆ For gastro-intestinal problems

All Vita Health Care products are available in pharmacies and drugstores. Please seek the advice of a qualified specialist.
